**YOUR COMPLIANCE SOLUTION FOR CALIFORNIA'S
 IRRIGATED LANDS REGULATORY PROGRAM**

The Irrigated Lands Regulatory Program requires that Sediment and Erosion Control Plans be prepared for certain agricultural properties

AEG is Here to Help YOU

AEG Can Prepare and Certify SECPs

Here's How it Works:

AEG Will:

- Come to your site to gather relevant information and to inspect the property;
- Evaluate the sediment and erosion conditions on the property;
- Determine appropriate / feasible sediment and erosion control practices needed for compliance;
- Prepare a SECP with input from the property owner(s), agent(s), and/or operator(s); and,
- Certify the SECP.

We've Put Some Thought Into How To Do This Right

Many SECPs can be kept very simple, by easily identifying and maintaining current irrigation management practices. However, if your property requires additional measures to mitigate sediment discharge and/or erosion control, we will work with you to find the most feasible solution for your operation.

AEG has the experience and knowhow to prepare SECPs quickly and efficiently, while minimizing the impact to your operation. Give us a call today for your **Free** estimate: **(916) 645-6014**

We Have a History with Agriculture

AEG has been providing services to the agricultural industry for many years and understands the hard work that goes into the maintenance and operation of agricultural land.

With our experience in the agricultural industry, we have teamed with the **Sacramento Valley Water Quality Coalition** in the development of the Sediment Discharge and Erosion Assessments for the Sacramento River Watershed. Our next step is to work with sub-watershed groups to define criteria to **exclude** qualifying properties from needing SECPs in the future.
